

## **The IHEID Environmental Committee is excited to encourage students to get on board with their latest initiative, The Recycling Library!**

In May 2018, the IHEID library published this [blog](#) about the total paper consumption at IHEID. It states that paper consumption at IHEID has been increasing year-to-year, with library printers using 555,000 sheets of A4 paper in 2017, which represented an almost 25% increase from the previous year. Along encouraging students and staff to print less, the Environmental Committee thought about an innovative, crowd-based solution that allows students to print less and thus, save money and reduce their carbon footprint.

### **The Recycling Library**

The Recycling Library functions through a simple, crowd-based system. The EC collects printed class readings from students at the entrance of the IHEID library (drop-off station). Papers are then alphabetically sorted and catalogized in a Google Sheet, before they are placed at the pick-up station located on Level 2, next to Bubble G2 in the IHEID library.

The Google Sheet is available [online](#) and lists all the available papers along with instructions on how to use the library. Simply search for the desired reading using the Ctrl+F function, mark it red and pick it up. Once you don't need the paper anymore, drop it off at the entrance of the library. The EC will then put it back into the Recycling Library and remove the red marking in the Google Sheet.

Since there is no formal system in place for the usage of The Recycling Library, we count on trust and goodwill among members of the IHEID student body. At present, we provide a collection of over 180 papers and we hope that this collection will expand over time.

So, please remember to look here before you print next time. Also, feel free to contribute any material that is no longer of any use to you at the marked trays placed outside the library doors.

May the forest be with you!
